

# Extraction Built for HR & Payroll Systems

ResNav's data and document extraction capabilities are designed to liberate critical HR and payroll information from source systems and reports. We transform it into structured, usable, and audit-ready data.

Our approach combines automation, system intelligence, and proven extraction methods to support compliance, audits, system transitions, and long-term data preservation.

## 1. Automated Data Extraction from HRIS Reports

We programmatically extract the underlying data fields required

## 2. Automated Document Retrieval from Source Systems

ResNav automates document retrieval by securely logging into source systems, navigating to the appropriate sections, and scripting the download of required documents

## 3. Intelligent Parsing of Files & Reports

We use advanced parsing tools and bots to extract data elements from a wide range of file formats

### ➞ Why Choose Us?

- More than 18,000 extractions and counting
- Protocols with 200+ payroll/HRIS systems
- Trusted & secure - we've been doing this since 1999

Modern HR and payroll environments generate vast amounts of data—but accessing that data when you need it most is often difficult, time-consuming, or costly.

### ➞ API-Based Data Integration (Where Available)

Data & Documents.  
Extracted. Structured.  
Ready.
